

METHOD OF VERIFYING A MONITORING AND RESPONSIVE  
INFRASTRUCTURE OF A SYSTEM

ABSTRACT OF THE INVENTION

5 A method of verifying a monitoring and responsive infrastructure of a  
system is provided and described. The method includes setting a sensor to  
a simulation mode. Further, a test value is provided to simulate a real value  
outputted by the sensor. While in the simulation mode, the test value instead  
of the real value is sent to the monitoring and responsive infrastructure to  
invoke a response. Moreover, the response to the test value is verified. In  
10 an embodiment, the monitoring and responsive infrastructure is compliant  
with an Intelligent Platform Management Interface specification.
